

FLEDGLING FUTURE : TRAILS

MASTERPLAN

Masterplan adds a connected trail system with seating areas and nearby restrooms. We also included new structures like a quarantine shed, an entrance pavilion, and a flexible event space for different activities. Planters and clear signage help tie everything together and make the site feel more welcoming and easy to navigate.

RESEARCH

I wanted my designs to connect to the seabird theme without being too literal, so I looked into how seabirds live. What stood out most was how social they are with their own kind. That idea inspired the trails, seating areas, and event space: places meant for people to gather, interact, and share the space just like seabirds do.
